

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A plasma display panel comprising:

a front substrate;

a back substrate;

a display electrode provided on said front substrate and formed of a scanning electrode and a sustain electrode;

a data electrode provided on said back substrate;

a multilayered first dielectric layer for covering ~~a said display electrode, which is provided on a front substrate and formed of a scanning electrode and a sustain electrode;~~
and

a multilayered second dielectric layer for covering ~~a said data electrode provided on a back substrate;~~ and

a sealing member for sealing said plasma display panel, said sealing member intervening between said front substrate and said back substrate arranged so as to face each other;

wherein at least one of

a periphery of an upper dielectric layer of ~~the said~~ first dielectric layer is positioned ~~identically or partially~~ in size and shape to a periphery of a lower dielectric layer ~~thereof~~ of said first dielectric layer, and and/or

a periphery of an upper dielectric layer of ~~the said~~ second dielectric layer is positioned ~~identically or partially~~ in size and shape to a periphery of a lower dielectric layer ~~thereof~~ of said second dielectric layer; and

wherein the periphery of said first dielectric layer is covered with said sealing member.
